PUMA

Software Engineer I (Full Stack)

Dear Hiring Team,

I am applying for the Software Engineer I (Full Stack) role in Pune. I spent 3 years as a Full Stack Developer at a US-based medical-device company, building web applications, internal AI agents and a CRM. I work in React, TypeScript, REST APIs and PostgreSQL.

The posting asks for agentic workflows, tool calling, streaming and RAG. site-to-agent, my hybrid BM25 + vector retrieval agent with cited answers and an eval harness, covers the RAG part. multi-agent-research-crew covers agent orchestration with retries, token budgets and citation checks. I use Claude Code daily and hold the Claude Code in Action and Claude Code 101 certifications, so AI-assisted engineering is how I already work.

I should be clear that I have no Java or Spring Boot experience. My back-end work is Node.js and FastAPI. I am a fast learner and care about accessible UI, tests and security, having pen-tested 5+ live Play Store apps. I can join immediately. My portfolio is at hussain-singapuri.vercel.app.

Kind regards,

Hussain Singapuri
