AI Automation Engineer

Dear Hiring Team,

I am applying for the AI Automation Engineer role. You ask for hands-on Claude Code experience and real projects: I use Claude Code every day, hold the Claude Code in Action and Claude Code 101 certifications along with CCDV-F and CCAO-F from Anthropic, and my work is public at github.com/huss2003. For Grok, I have not used the xAI API in a project yet; I work with the Claude API daily and would gladly build a Grok-backed demo.

Your first three projects are close to things I have already built. ai-lead-receptionist is a Claude agent over SMS and web chat with Twilio that qualifies leads and books jobs, close to your support triage and routing. lead-intel-engine discovers, enriches and scores leads with a robots-aware, rate-limited crawler, like your sourcing bot. multi-agent-research-crew runs agents on a DAG with retries, timeouts and token budgets, which is how I think about reliable, monitored workflows.

In 3 years as a Full Stack Developer at a US-based medical-device company I built internal AI agents and a CRM, and I integrate HubSpot, webhooks and REST APIs in my own projects. I have not used Monday.com or Go High Level, but I would learn both on the paid project. I am based in Pune and happy to talk through the schedule. Portfolio: hussain-singapuri.vercel.app.

Kind regards,

Hussain Singapuri
