Coditude

AI Product Engineer

Dear Coditude hiring team,

I am applying for the AI Product Engineer role. I spent three years as a Full Stack Developer at a US-based medical-device company, building web applications, a CRM and internal AI agents, and I use Claude Code every day as my main way of building. I review each change it makes and take the keyboard back for schema, security and payment code, and I would be glad to drive it live in an interview.

Your must-haves match my work. For LLM agents and how they fail: multi-agent-research-crew (github.com/huss2003/multi-agent-research-crew) runs planner, researcher, writer and verifier agents with claim-level citation checks, and site-to-agent (github.com/huss2003/site-to-agent) adds SSRF-hardened fetching and an eval harness. For PostgreSQL and tests that protect money paths, Orbital Surplus (orbital-surplus.vercel.app) holds stock in one transaction, confirms payments idempotently and has 9 end-to-end API tests. I also work in Python (FastAPI, asyncio), Next.js and TypeScript.

I am based in Pune and can join immediately. I have no AWS or Datadog experience yet, but I have shipped 30+ projects in unfamiliar areas and ramp quickly. Portfolio: https://hussain-singapuri.vercel.app

Kind regards,

Hussain Singapuri
