Honeybee Tech Solutions
Python/AI Developer

Dear Honeybee Tech Solutions hiring team,

I am applying for the Python/AI Developer role in Pune. I have three years of professional full-stack experience at a US-based medical-device company, where I built web applications, a CRM and internal AI agents. I live in Pune and can join immediately.

Your must-haves are Core Python, REST APIs, databases and Git. nanoserve (github.com/huss2003/nanoserve) is an LLM inference engine I built in Python and FastAPI, with an OpenAI-compatible streaming API and 3.1x throughput over sequential decoding. lead-intel-engine (github.com/huss2003/lead-intel-engine) is a FastAPI and SQLite service. My APIs also cover signed webhooks and Stripe, Twilio and HubSpot integrations, backed by PostgreSQL.

For the GenAI side, multi-agent-research-crew (github.com/huss2003/multi-agent-research-crew) runs planner, researcher, writer and verifier agents with claim-level citation checks, and site-to-agent adds hybrid retrieval with an eval harness. I have used FastAPI rather than Django or Flask, and I wrote my own agent orchestration rather than using LangChain. I would learn either quickly. Portfolio: https://hussain-singapuri.vercel.app

Kind regards,

Hussain Singapuri
