Betterworks Systems, Inc.

Software Engineer I (Full Stack, AI-Native)

Dear Betterworks hiring team,

I am applying for the Software Engineer I (Full Stack, AI-Native) role. For 3 years I was a Full Stack Developer at a US-based medical-device company, working remotely, where I built full-stack web applications, a CRM and internal AI agents. My day-to-day stack is React, TypeScript, Node.js and PostgreSQL.

You ask for working experience with end-to-end testing: my Orbital Surplus store (orbital-surplus.vercel.app, a fictional demo brand in Stripe test mode) has race-safe stock holds and 9 end-to-end API tests, and my portfolio backend (hussain-singapuri.vercel.app) has 10. You ask for AI tool proficiency and the judgment to verify its output. I use Claude Code every day and hold Anthropic's Claude Code certifications. In PageForge (pageforge-hazel.vercel.app/abm), a deterministic validator flags unsupported numbers before anything ships.

I have not used Vue, and I would ramp up from my React and Next.js experience. I am based in Pune, comfortable with remote, async work, and available immediately. My portfolio and code are at hussain-singapuri.vercel.app and github.com/huss2003.

Kind regards,

Hussain Singapuri
