AI Automation Engineer - MERN Stack and LLM Integrations

Dear Hiring Team,

I am applying for the AI Automation Engineer - MERN Stack and LLM Integrations role. I am a software developer turned AI engineer with 3 years of professional full-stack experience at a US-based medical-device company, where I built web applications, a CRM and internal AI agents. I use Claude Code every day and hold the Claude Certified Developer – Foundations certificate from Anthropic.

Your posting asks for LLM API integration, function calling, RAG and AI agents on JavaScript, TypeScript, React.js and Node.js. site-to-agent (github.com/huss2003/site-to-agent) is a grounded chat agent with hybrid BM25 + pgvector retrieval, cited answers and an eval harness. ai-lead-receptionist (github.com/huss2003/ai-lead-receptionist) is a Claude agent behind Twilio webhooks that qualifies leads and books jobs. TripSync uses Gemini structured outputs to return JSON packages, and multi-agent-research-crew adds retries, timeouts and token budgets to Claude agents.

To be straightforward, my databases have been PostgreSQL, Supabase and SQLite rather than MongoDB, and I have built webhook automations in code rather than in n8n or Make. I pick tools up quickly and can model an n8n flow as a demo. I am based in Pune, can join immediately, and my portfolio is at hussain-singapuri.vercel.app. Thank you for your time.

Kind regards,

Hussain Singapuri
