ArangoDB

Frontend Engineer

Dear Arango hiring team,

I am applying for the Frontend Engineer role. I have 3 years of professional full-stack experience at a US-based medical-device company, where I built web applications, a CRM and internal AI agents. My strongest work is in React, TypeScript, HTML and CSS, and I would like to put it behind the ArangoDB and Arango Data Platform UIs.

Two projects map to what you describe. Safey Inventory (github.com/huss2003/Safey-QMS) is a data-heavy React 19 and TypeScript app on TanStack Query, Tailwind v4 and shadcn/ui, with batch tracing, FIFO allocation and recall flows. site-to-agent (github.com/huss2003/site-to-agent) is an AI interface that returns cited answers over hybrid BM25 and vector retrieval, with an eval harness. I write end-to-end API tests (9 and 10 in two of my projects) and use Claude Code every day.

I should be clear that I have no BackboneJS or jQuery experience and have not worked with ArangoDB or graph visualization yet. I read unfamiliar code carefully, having security-tested 5+ live apps, and I would approach the migration to React and TypeScript the same way. I live in Pune, am authorized to work in India and can join immediately. Portfolio: https://hussain-singapuri.vercel.app

Kind regards,

Hussain Singapuri
